# 1 Introduction

## 1.1 Purpose

This document provides details on how to use MCC with CEC173x part and use Soteria secure-boot solution.

## 1.2 Scope

The scope of this document is limited to providing the user with a high-level overview of MCC, Soteria-G3 and getting started with using Soteria-G3 in CEC173x part.

## 1.3 References

MPLAB MCC getting started: <https://microchipdeveloper.com/mcc:start>

## 1.4 Pre-requisites

<b>IDE</b>	MPLABX IDE v6.00 or higher
<b>DFP</b>	v1.5.142 or higher
<b>Debugger (only in case of debugging)</b>	ICD4 or PICKit4
<b>Compiler</b>	XC32 v4.00
<b>Board</b>	CEC1736 development board with, 1. CEC1736 internal flash pre-programmed binary 2. External flash modules with pre-programmed AP_FW binaries

## 1.5 Assumptions and Dependencies

The user is expected to have a fair idea of using MCC with any other Microchip micro-controllers.

## 1.6 Glossary of Terms and Acronyms

<b>Term/Acronym</b>	<b>Meaning/Expansion</b>
OEM	Original Equipment Manufacturer
AP	Application Processor
SG3	Soteria Generation 3
MCC	Microchip Code Configurator
EC_FW	Embedded Controller Firmware
SPI	Serial Peripheral Interface
CoT	Chain Of Trust
HAL	Hardware Abstraction Layer
PLIB	Peripheral LIBrary
API	Application Programming Interface
GPIO	General Purpose Input Output
ECIA	Embedded Controller Interrupt Aggregator
IRQ	Interrupt ReQuest
BSP	Board Support Package
UART	Universal Asynchronous Receiver and Transmitter
Hex	Hexadecimal

## 2 What is Soteria?

Soteria-G3 is a firmware design executed on the CEC173x family of devices. It can be used in conjunction with any application processor (AP) that boots out of an external SPI flash device to extend the Root of Trust and enforce a secure boot process in the system.

Soteria-G3 uses the CEC173x immutable secure bootloader, implemented in ROM, as the system Root-of-Trust (RoT). The CEC173x secure bootloader loads, decrypts and authenticates the embedded controller firmware (EC\_FW) from the external (or) internal SPI Flash. The validated EC\_FW that runs on the CEC173x is designed to subsequently authenticate the application processor firmware (AP\_FW) located in the same SPI Flash component and up to three additional SPI Flash components.

Soteria-G3 prevents the system from booting unless the AP\_FW stored in the external SPI Flash is authentic code signed by the OEM. It offers security features to authenticate the SPI Flash image in the external SPI flash device.

The validated AP\_FW that runs on the application processor can utilize crypto resources in the CEC173x to authenticate other code in the system, thereby extending the Chain-of-Trust (CoT) to ensure that all code running in the system is authorized.

Soteria-G3 also supports secure firmware updates. EC\_FW can authenticate updates to both AP\_FW and EC\_FW in the system.

### 3 Setting up an MCC project with Soteria library

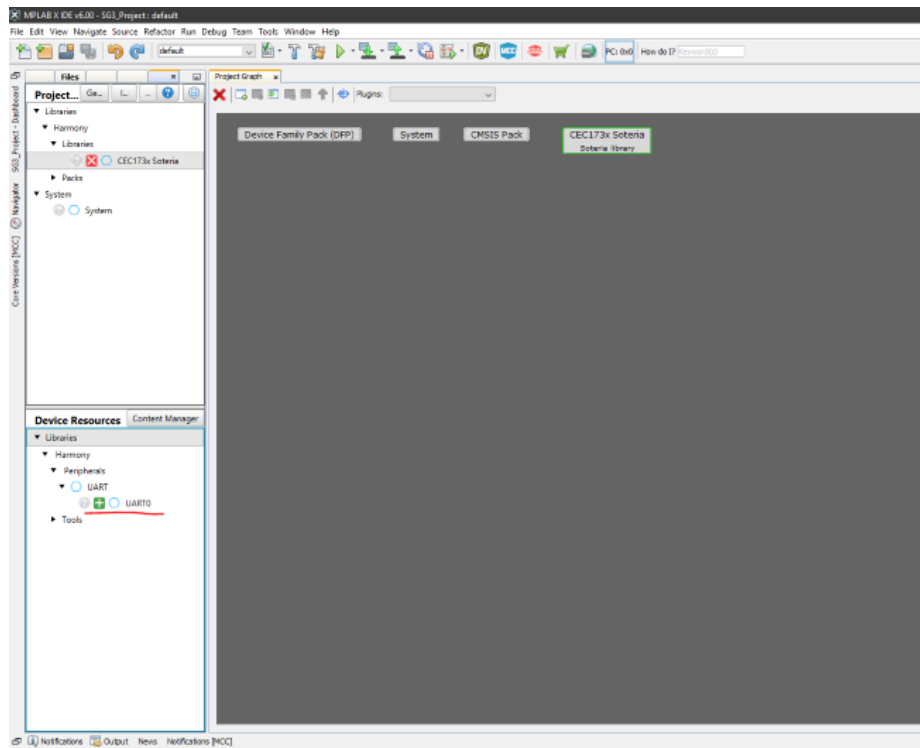

1. Create a new **“32-bit MCC Harmony Project”** and select **“CEC1736\_S0\_2ZW”** as the target device
2. Select and download **“cec173x\_soteria\_lib”** component from MCC content manager
3. To add Soteria as a library into the created application project, **“double click”** on **“CEC173x Soteria”** component which can be found under **“Libraries → Harmony → Libraries → CEC173x Soteria”** under **“Device Resources”** window as shown below

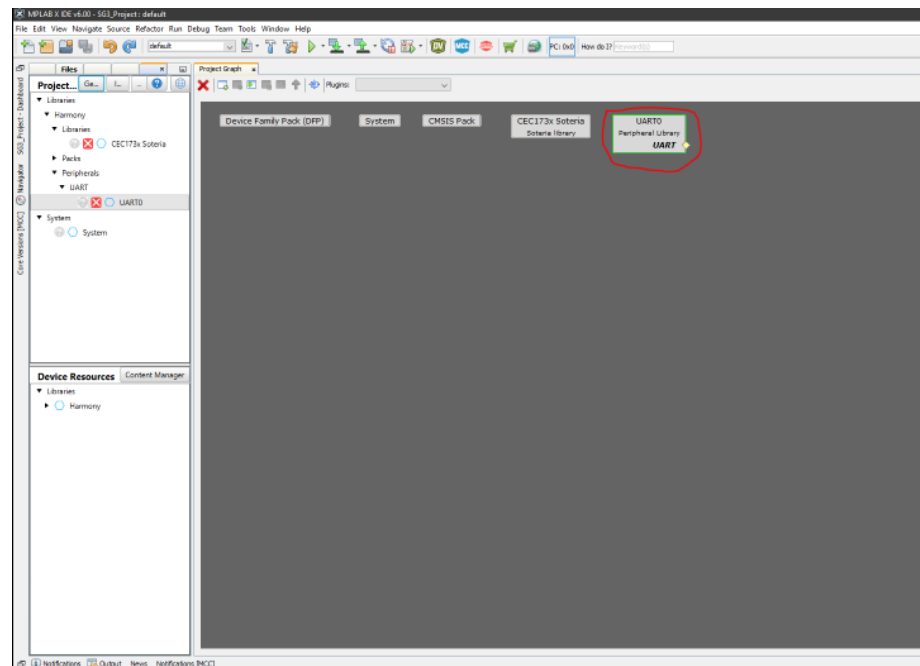

4. The Soteria library component should get added in the **“Project Graph”** and **“Project Resources”** as shown below

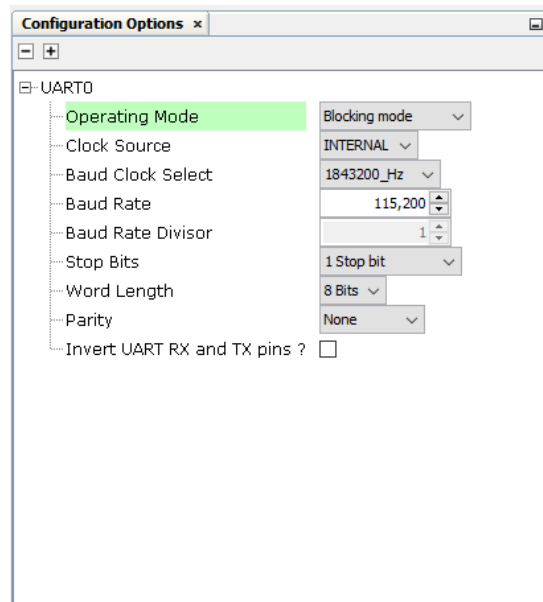

- To add UART peripheral into the created application project, **“double click”** on **“UART0”** component which can be found under **“Peripherals → UART → UART0”** under **“Device Resources”** window as shown below

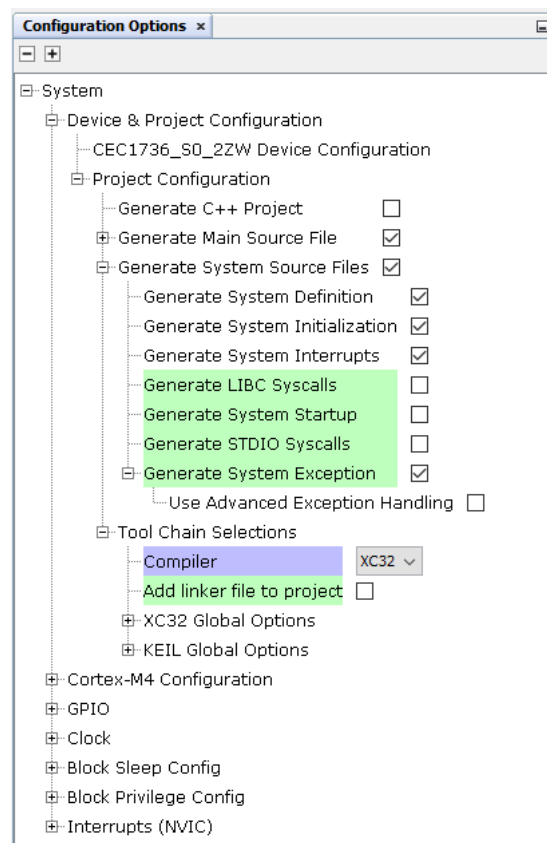

- The UART peripheral component should get added in the **“Project Graph”** and **“Project Resources”** as shown below

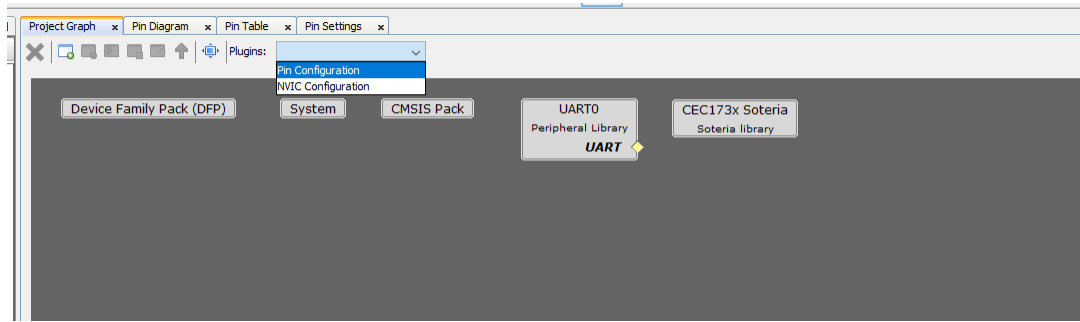

7. Change the UART0 configuration as shown in the below image

8. Select the project configurations as shown in the below image

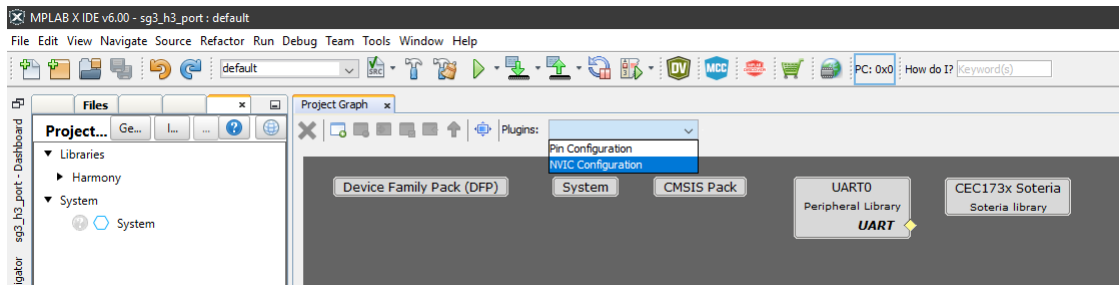

9. Goto **“Plugins -> Pin Configuration”** located in the project graph as shown in the below image

10. Change the pin configurations as shown in the below image

Pin Number	Pin ID	Custom Name	Function	Direction	Latch	Output Buffer	Polarity	PU/PD	Interrupt	Drive Strength	Slew Rate
A1	GPIO063	GPIO_GPIO063	GPIO	In	n/a	Push Pull	Non-Inverted	None	FALLING_EDGE	Level0	Slow
A2	GPIO113	GPIO_GPIO113	GPIO	In	n/a	Push Pull	Non-Inverted	None	FALLING_EDGE	Level0	Slow
A6	GPIO107	GPIO_GPIO107	GPIO	In	n/a	Push Pull	Non-Inverted	None	FALLING_EDGE	Level0	Slow
A7	GPIO046	GPIO_GPIO046	GPIO	In	n/a	Push Pull	Non-Inverted	None	FALLING_EDGE	Level0	Slow
B2	GPIO050	GPIO_GPIO050	GPIO	In	n/a	Push Pull	Non-Inverted	None	FALLING_EDGE	Level0	Slow
B3	GPIO015	GPIO_GPIO015	GPIO	In	n/a	Push Pull	Non-Inverted	None	FALLING_EDGE	Level0	Slow
B7	GPIO140	GPIO_GPIO140	GPIO	In	n/a	Push Pull	Non-Inverted	None	FALLING_EDGE	Level0	Slow
C2	GPIO047	GPIO_GPIO047	GPIO	In	n/a	Push Pull	Non-Inverted	None	FALLING_EDGE	Level0	Slow
F2	GPIO013	GPIO_GPIO013	GPIO	In	n/a	Push Pull	Non-Inverted	None	FALLING_EDGE	Level0	Slow
F3	GPIO127	GPIO_GPIO127	GPIO	In	n/a	Push Pull	Non-Inverted	None	FALLING_EDGE	Level0	Slow
G2	GPIO201	GPIO_GPIO201	GPIO	In	n/a	Push Pull	Non-Inverted	None	FALLING_EDGE	Level0	Slow

11. Goto **“Plugins -> NVIC Configuration”** located in the project graph as shown in the below image

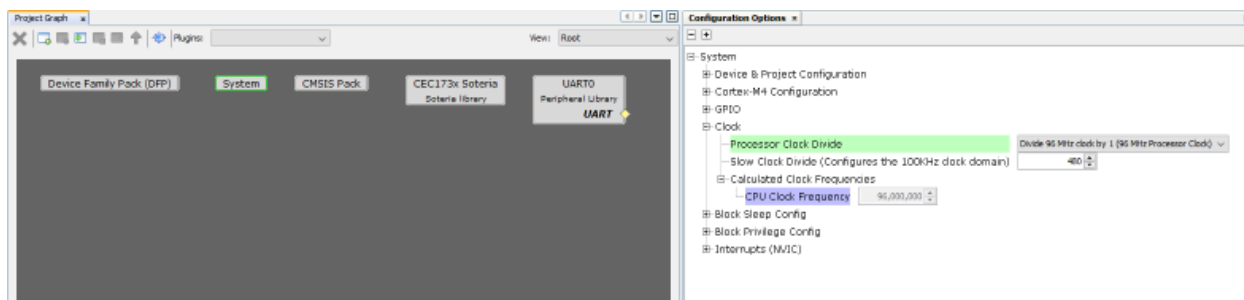

12. Change the interrupt configurations as shown in the below image

0	GPIO140_GRP (GIRQ08)	<input checked="" type="checkbox"/>	7	GPIO140_GRP_InterruptHandler
1	GPIO107_GRP (GIRQ09)	<input checked="" type="checkbox"/>	7	GPIO107_GRP_InterruptHandler
1	GPIO113_GRP (GIRQ09)	<input checked="" type="checkbox"/>	7	GPIO113_GRP_InterruptHandler
1	GPIO127_GRP (GIRQ09)	<input checked="" type="checkbox"/>	7	GPIO127_GRP_InterruptHandler
2	GPIO046_GRP (GIRQ10)	<input checked="" type="checkbox"/>	7	GPIO046_GRP_InterruptHandler
2	GPIO047_GRP (GIRQ10)	<input checked="" type="checkbox"/>	7	GPIO047_GRP_InterruptHandler
2	GPIO050_GRP (GIRQ10)	<input checked="" type="checkbox"/>	7	GPIO050_GRP_InterruptHandler
2	GPIO063_GRP (GIRQ10)	<input checked="" type="checkbox"/>	7	GPIO063_GRP_InterruptHandler

3	GPIO013_GRP (GIRQ11)	<input checked="" type="checkbox"/>	7	GPIO013_GRP_InterruptHandler
3	GPIO015_GRP (GIRQ11)	<input checked="" type="checkbox"/>	7	GPIO015_GRP_InterruptHandler
4	GPIO201_GRP (GIRQ12)	<input checked="" type="checkbox"/>	7	GPIO201_GRP_InterruptHandler
5	I2CSMB0_GRP (GIRQ13)	<input checked="" type="checkbox"/>	7	I2CSMB0_GRP_Handler
5	I2CSMB1_GRP (GIRQ13)	<input checked="" type="checkbox"/>	7	I2CSMB1_GRP_Handler
5	I2CSMB2_GRP (GIRQ13)	<input checked="" type="checkbox"/>	7	I2CSMB2_GRP_Handler
5	I2CSMB3_GRP (GIRQ13)	<input checked="" type="checkbox"/>	7	I2CSMB3_GRP_Handler
5	I2CSMB4_GRP (GIRQ13)	<input checked="" type="checkbox"/>	7	I2CSMB4_GRP_Handler
6	DMA_CH00_GRP (GIRQ14)	<input checked="" type="checkbox"/>	7	DMA_CH00_GRP_Handler
6	DMA_CH01_GRP (GIRQ14)	<input checked="" type="checkbox"/>	7	DMA_CH01_GRP_Handler
6	DMA_CH02_GRP (GIRQ14)	<input checked="" type="checkbox"/>	7	DMA_CH02_GRP_Handler
6	DMA_CH03_GRP (GIRQ14)	<input checked="" type="checkbox"/>	7	DMA_CH03_GRP_Handler
6	DMA_CH04_GRP (GIRQ14)	<input checked="" type="checkbox"/>	7	DMA_CH04_GRP_Handler
6	DMA_CH05_GRP (GIRQ14)	<input checked="" type="checkbox"/>	7	DMA_CH05_GRP_Handler
6	DMA_CH06_GRP (GIRQ14)	<input checked="" type="checkbox"/>	7	DMA_CH06_GRP_Handler
6	DMA_CH07_GRP (GIRQ14)	<input checked="" type="checkbox"/>	7	DMA_CH07_GRP_Handler
6	DMA_CH08_GRP (GIRQ14)	<input checked="" type="checkbox"/>	7	DMA_CH08_GRP_Handler
6	DMA_CH09_GRP (GIRQ14)	<input checked="" type="checkbox"/>	7	DMA_CH09_GRP_Handler
10	QMSPI0_GRP (GIRQ18)	<input checked="" type="checkbox"/>	7	QMSPI0_GRP_Handler
10	QMSPI1_GRP (GIRQ18)	<input checked="" type="checkbox"/>	7	QMSPI1_GRP_Handler
15	SPIMON0_VLTN_GRP (GIRQ24)	<input checked="" type="checkbox"/>	7	SPIMON0_VLTN_GRP_Handler
15	SPIMON0_MTMON_GRP (GIRQ24)	<input checked="" type="checkbox"/>	7	SPIMON0_MTMON_GRP_Handler
15	SPIMON0_LTMON_GRP (GIRQ24)	<input checked="" type="checkbox"/>	7	SPIMON0_LTMON_GRP_Handler
15	SPIMON1_VLTN_GRP (GIRQ24)	<input checked="" type="checkbox"/>	7	SPIMON1_VLTN_GRP_Handler
15	SPIMON1_MTMON_GRP (GIRQ24)	<input checked="" type="checkbox"/>	7	SPIMON1_MTMON_GRP_Handler
15	SPIMON1_LTMON_GRP (GIRQ24)	<input checked="" type="checkbox"/>	7	SPIMON1_LTMON_GRP_Handler

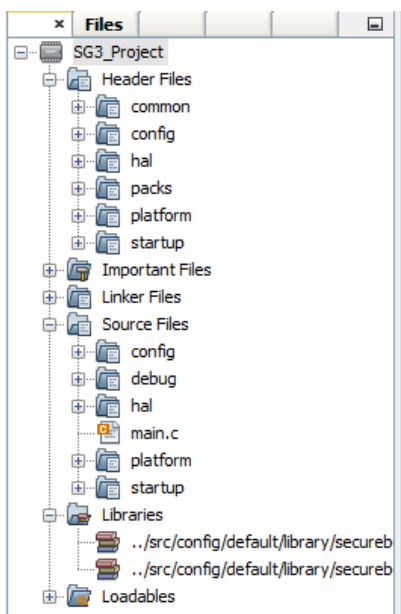

### 13. Change the core clock settings as shown in the image below

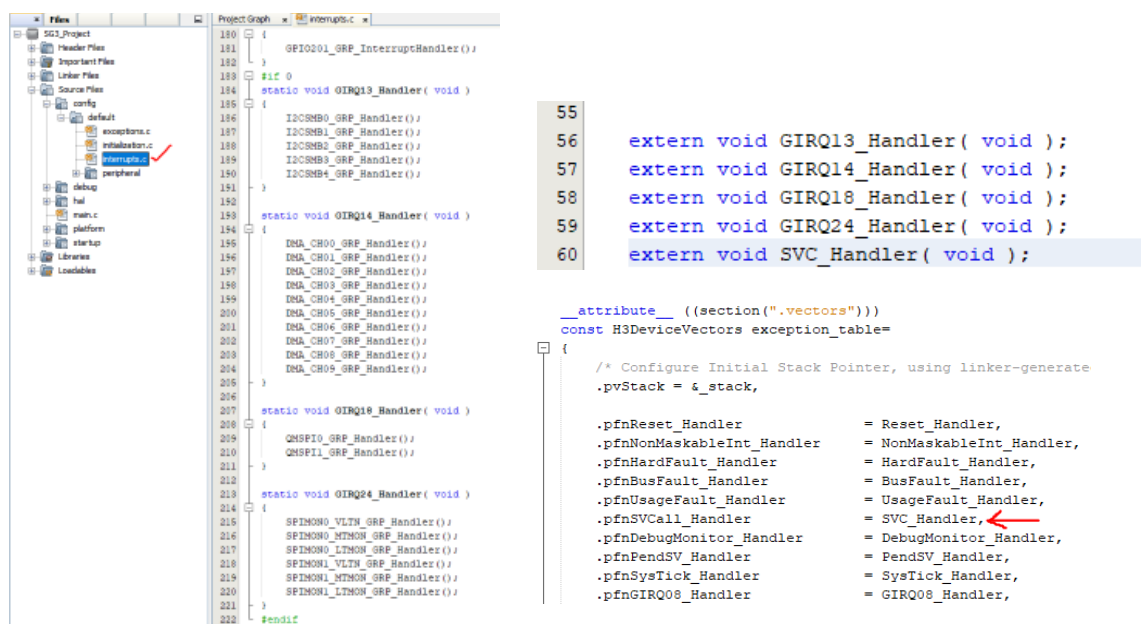

20. Use the “**platform**” folder provided in “**cec173x\_soteria\_lib/apps/sg3\_h3\_port**” application project (refer [Section 4.1](#)) in this new project (Make sure to add this folder into the XC32 compiler include path in your project settings)

21. After steps #15 to #18, the project structure should look like the image below

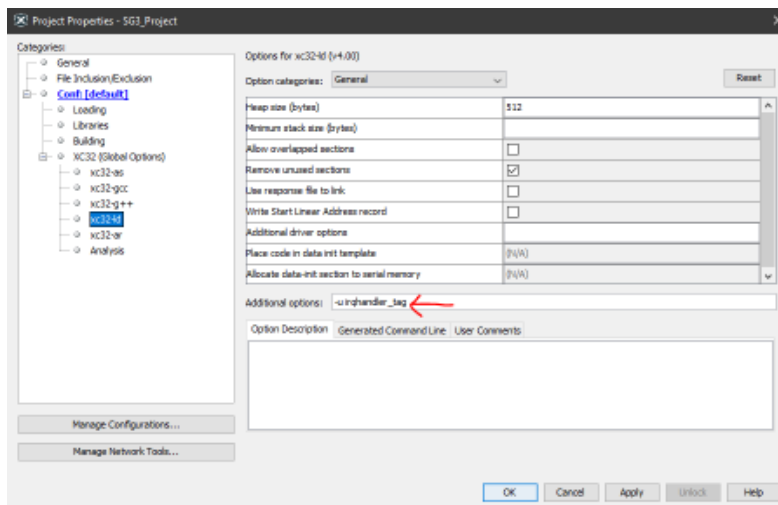

22. Navigate to “**Source Files -> config -> default -> interrupts.c**” in the project and carry out the following changes as shown in the below image

- Disable “**GIRQ13\_Handler**”, “**GIRQ14\_Handler**”, “**GIRQ18\_Handler**”, “**GIRQ24\_Handler**” functions and add their extern declarations
- Change the name of Supervisor Call handler function from “**SVC\_Call\_Handler**” to “**SVC\_Handler**”

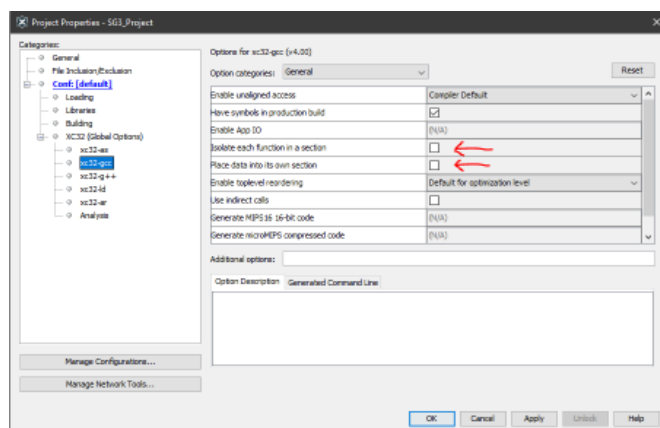

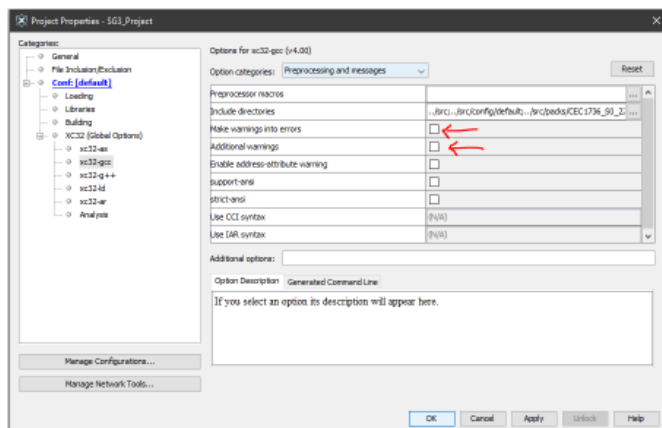

23. Add “-u irqhandler\_tag” under additional options text box section of XC32 linker options as shown in the below image

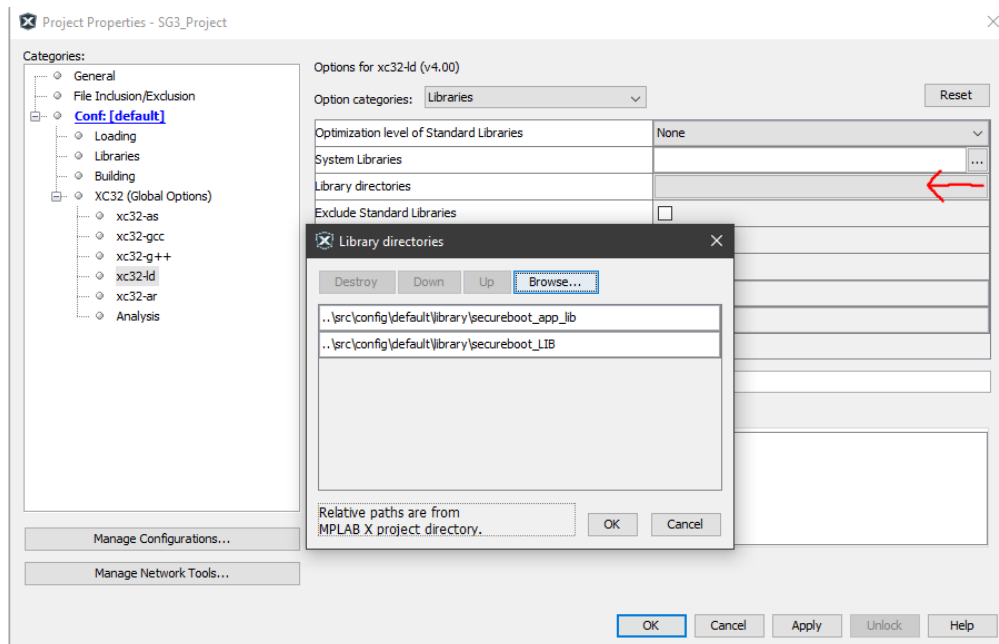

24. Disable the following in XC32 compiler settings as shown in the below image

- Make warnings into errors
- Additional warnings
- Isolate each function in a section
- Place data into its own section

25. Add the path to the Soteria libraries into XC32 linker options as shown in the below image

26. If you get the below error during the project creation process, then navigate to **“Tools -> Options -> Plugins Tab -> MPLAB Code Configurator x.x”** as shown in Step #2 under [Section 4.1](#) of this document and re-set the path to the Harmony Framework with the same value again

27. Include the file “common.h” in the main.c file of this project
28. To run the SG3 application, the application’s main function should call the functions described in [Section 6.1.2](#)
29. Refer to [Section 6](#) and [Section 8](#) to understand the usage of the available API functions and OEM tasks

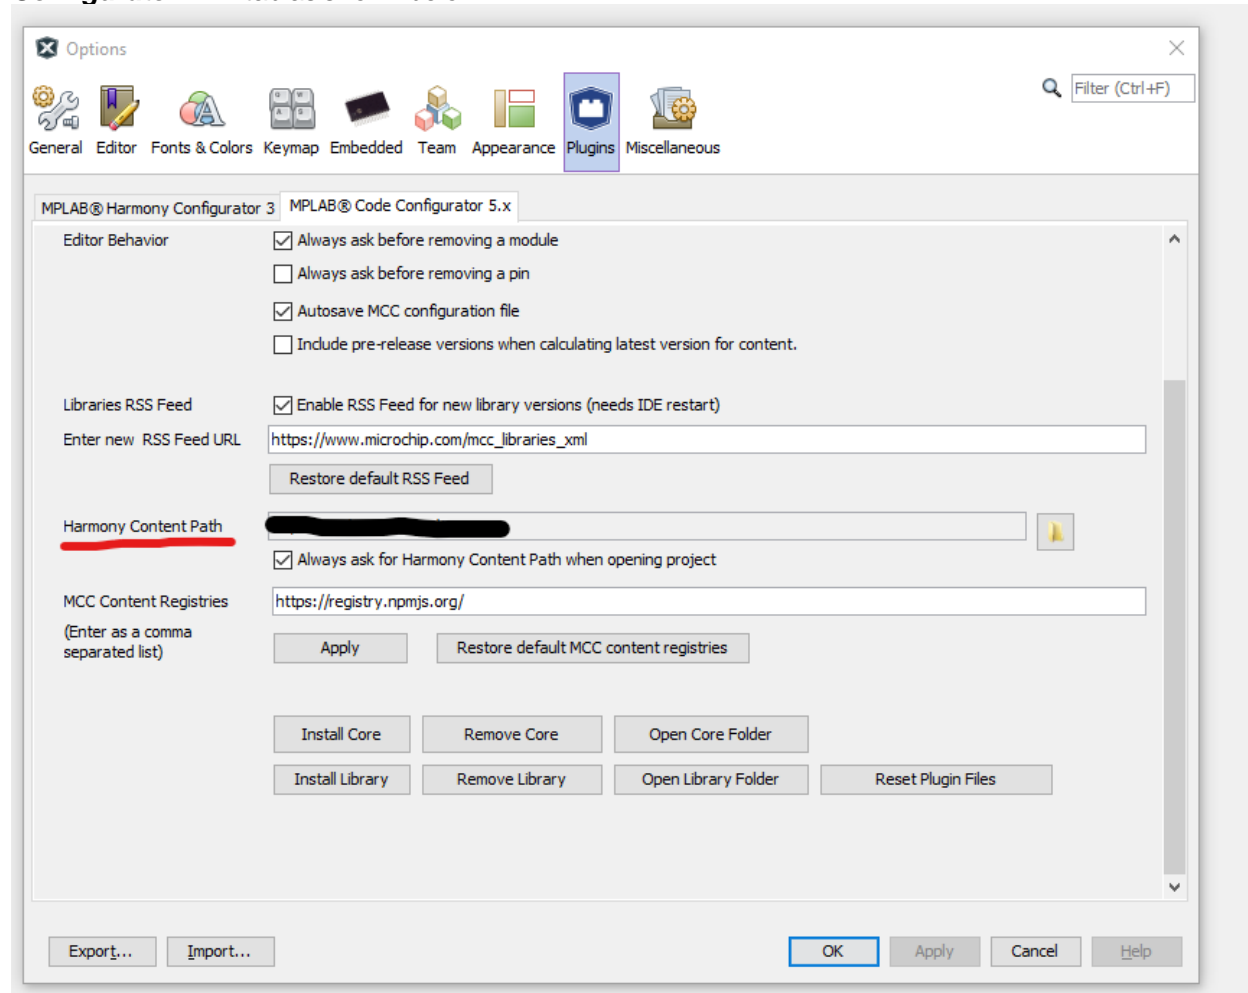

## 4 Soteria-G3 sample library project

To ease the process of creating a Soteria-G3 project from scratch, a sample project has already been created, which can be found under

***“HarmonyFrameworkPath/cec173x\_soteria\_lib/apps/sg3\_h3\_port/”***

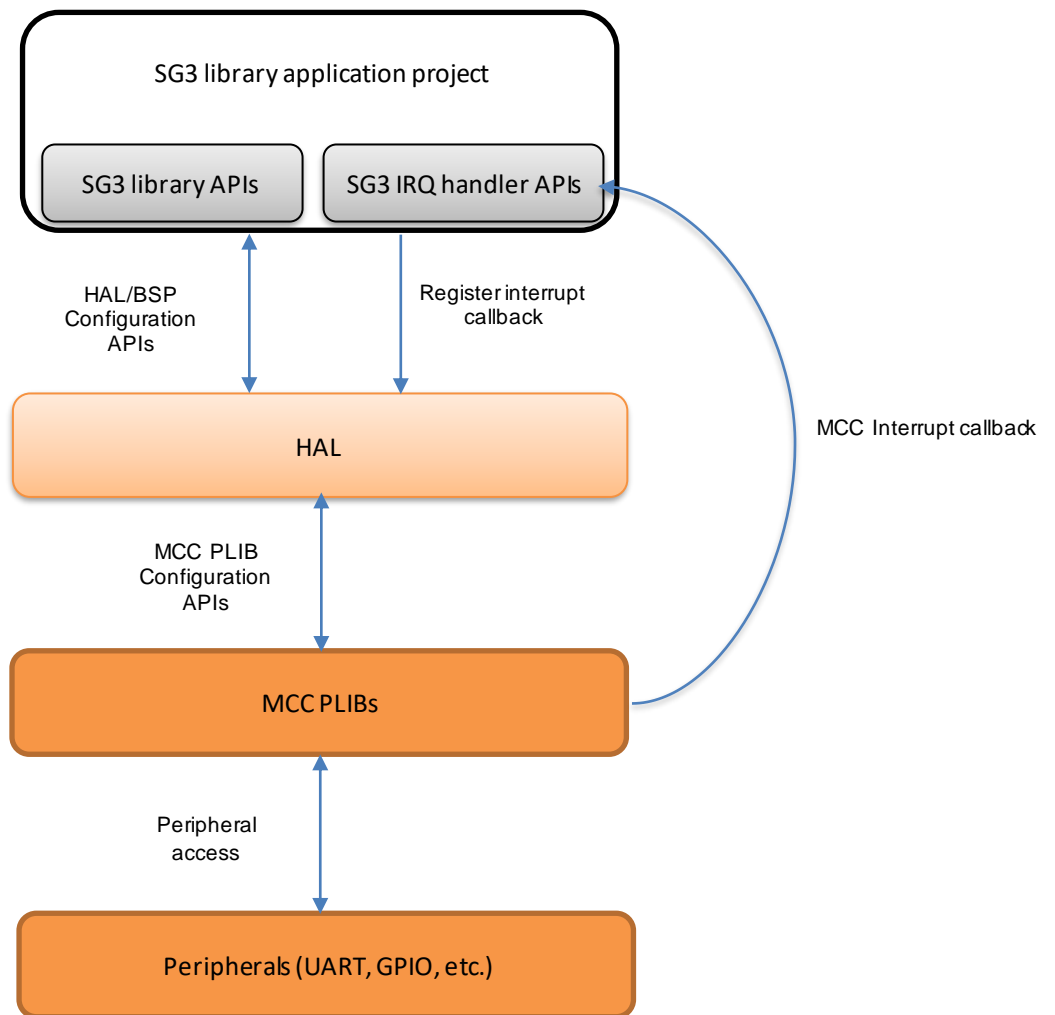

### 4.1 Opening SG3 sample library project

1. From the MCC content manger, select the component ***“cec173x\_soteria\_lib”*** and download it
2. Locate the ***“MCC Content Path”*** by navigating to ***“Tools -> Options -> Plugins Tab -> MPLAB Code Configurator x.x”*** tab as shown below

3. Navigate to this location to find the folder ***“cec173x\_soteria\_lib/apps/sg3\_h3\_port/firmware/”*** which contains the SG3 application project for this device
4. Open the ***“sg3\_h3\_port”*** sample application project in MPLABX
5. Users can get started with developing an application by using the application task functions of this project as mentioned in [Section 8](#) of this document

## 4.2 High level design

## 5 Soteria-G3 library project structure

<b>common/debug/ common/include/</b>	APIs for UART debugging 1. APIs for working with GPIO and ECIA blocks 2. Common file inclusions for use by application 3. Linker script
<b>config/ hal/</b>	MCC generated PLIB files Hardware Abstraction Layer APIs (not to be used unless an API is not present in ahb_api_mpu.h)
<b>kernel/</b>	SG3 APIs for application use
<b>oem/</b>	Functions and definitions for adding user code
<b>packs/</b>	MCC generated device specific files (not for application use)
<b>platform/</b>	1. Application specific configurations 2. Interrupt handling routines
<b>startup/</b>	Device startup file

## 6 Soteria-G3 library APIs

### 6.1.1 UART debugging

#### 6.1.1.1 Formatted printing to UART

Function prototype:

```
void tracex(const char *fmt, ...);
```

Description:

The function usage is like the ***printf*** function of stdio

Inputs:

Same as ***printf*** function of stdio

Outputs:

None

#### 6.1.1.2 ISR safe formatted printing to UART

Function prototype:

```
void tracex_from_ISR(const char *fmt, ...);
```

Description:

This function is an ISR safe equivalent of ***tracex***

Inputs:

Same as ***printf*** function of stdio

Outputs:

None

#### 6.1.1.3 Hex dump to UART

Function prototype:

```
void print_buf(uint8_t *buf, uint32_t len);
```

Description:

Prints hexadecimal values inside a buffer of user defined length

Inputs:

Input Parameter	Description
buf	Pointer to a user defined allocated buffer which contains
len	Length of the user defined allocated buffer

Outputs:

None

## 6.1.2 Soteria-G3 specific APIs

### 6.1.2.1 Soteria-G3 firmware initialization

Function prototype:

```
int sg3_init(void)
```

Description:

Initializes the Soteria-G3 firmware application

Inputs:

None

Outputs:

Input Parameter	Description
0	Soteria-G3 initialization succeeded
-1	Soteria-G3 initialization failed

### 6.1.2.2 Start Soteria-G3 firmware operation

Function prototype:

```
void sg3_start(void)
```

Description:

Runs the Soteria-G3 firmware application

**Note:**Inputs:

None

Outputs:

None

### 6.1.3 GPIO and ECIA peripheral access

To configure the GPIO and ECIA peripherals from OEM functions, please refer to the file “**ahb\_api\_mpu.h**” present in “**cec173x\_soteria\_lib/apps/sg3\_h3\_port**” sample SG3 project. Accessing these peripherals directly using MCC generated APIs is not allowed because of software design constraints.

### 6.1.4 Interrupts

The following interrupts are already defined in the Soteria-G3 application library, hence re-defining these interrupt handlers will cause a build error.

1. GIRQ13\_Handler
2. GIRQ14\_Handler
3. GIRQ18\_Handler
4. GIRQ24\_Handler
5. SVC\_Handler

For use in your custom Soteria-G3 project, it is enough to declare the prototypes for these handlers as follows.

1. extern void GIRQ13\_Handler (void);
2. extern void GIRQ14\_Handler (void);
3. extern void GIRQ18\_Handler (void);
4. extern void GIRQ24\_Handler (void);
5. extern void SVC\_Handler (void);

Make sure that the names of the ISRs above match with those in the vector table generated by MCC (located in **config/default/interrupts.c**).

## 7 Soteria user interaction and feedback

### 7.1 Debugging

1. Connect a micro-USB cable to the P2 connector on the development board
2. Connect the debugger to the J33 connector on the development board

3. Open the “**sg3\_h3\_port**” sample Soteria project using MPLABX IDE (Refer [Section 4.1](#))
4. Clean and build the project by selecting “**Clean and Build**” option from the project context menu
5. Start a debug session of this project by selecting the “**Debug**” option from the project context menu
6. Click on “Run” from the “Debug” context menu
7. Open “PuTTY” or any other serial port application with the following settings
  - a. Baud rate: 115200
  - b. Stop bits: 1
  - c. Flow control: Off
  - d. Parity: None
8. The UART output from SG3 can be observed on the serial port application

### 7.2 On board LEDs

State	Observation
Authenticating AP images	Blink rate = 2Hz Pattern = None
Authentication completed and no error detected	Blink rate = 0.5Hz Pattern = None
Authentication completed and non-fatal error detected	Blink rate = 1Hz Pattern = 2

Authentication completed and fatal error detected	Blink rate = 1Hz Pattern = 1
Executing recovery sequence	Blink rate = 4Hz Pattern = None
Authentication completed post recovery and no error detected	Blink rate = 1Hz Pattern = None

LED12 behavior

State	AP0 critical image	AP1 critical image	LED5	LED6
Authenticating AP images	No failure	No failure	Off	Off
	Image failure	No failure	Blink rate = 1Hz Pattern = None	Off
	No failure	Image failure	Off	Blink rate = 1Hz Pattern = None
	Image failure	Image failure	Blink rate = 1Hz Pattern = None	Blink rate = 1Hz Pattern = None
Executing recovery sequence	Recover image	No recovery	Blink rate = 4Hz Pattern = None	Off
	No recovery	Recover image	Off	Blink rate = 4Hz Pattern = None
	Recover image	Recover image	Blink rate = 4Hz Pattern = None	Blink rate = 4Hz Pattern = None
Authentication completed and error detected	Non-fatal error	No failure	Blink rate = 1Hz Pattern = None	Off
	No Failure	Non-fatal error	Off	Blink rate = 1Hz Pattern = None
	Non-fatal error	Non-fatal error	Blink rate = 1Hz Pattern = None	Blink rate = 1Hz Pattern = None
	No failure	Fatal error	Off	Blink rate = 1Hz

				Pattern = 2
	Non-fatal error	Fatal error	Blink rate = 1Hz Pattern = None	Blink rate = 1Hz Pattern = 2
	Fatal error	X	Blink rate = 1Hz Pattern = 1	Blink rate = 1Hz Pattern = 1
Authentication completed and no error detected	Pass	Pass	Off	Off
Authentication completed post recovery	Image recovered	No image recovered	Blink rate = 1Hz Pattern = None	Off
	No image recovered	Image recovered	Off	Blink rate = 1Hz Pattern = None
	Image recovered	Image recovered	Blink rate = 1Hz Pattern = None	Blink rate = 1Hz Pattern = None

LED5 and LED6 behavior

**Blink patterns:**

1. Blink – Blink – Off – Off <repeat>
2. Blink – Off – Off <repeat>

## 8 Application tasks for debugging

Soteria provides OEM task functions for user to play around with various features of the application project.

There are three functions provided to the user to get started with Soteria.

- `oem_task1_function()`
- `oem_task2_function()`
- `oem_task3_function()`

The user can add his own code inside these functions to evaluate the capabilities and features of Soteria and CEC173x secure-boot controller.

Please refer to the sample Soteria application project present in “***cec173x\_soteria\_lib/apps/sg3\_h3\_port***” for reference. The OEM task functions can be located under “***src/oem/oem\_task1***”, “***src/oem/oem\_task2***” and “***src/oem/oem\_task3***” directories.

## 9 Revision History

Name	Revision Level	Date	Section	Remarks
Shreyas Kannan	0.1	March 29, 2022	1	Initial draft
Shreyas Kannan	0.2	March 30, 2022	2, 3, 4, 5, 6	Updated
Shreyas Kannan	0.3	April 1, 2022	2, 3, 4, 5, 6	Updated
Shreyas Kannan	0.4	April 5, 2022	1.4, 1.6, 2, 4, 5	Updated
Shreyas Kannan	0.5	April 6, 2022	6.2	Updated
Shreyas Kannan	0.6	April 7, 2022	4, 7	Updated
Shreyas Kannan	1.0	May 18, 2022	3, 4, 6, 8	Updated
